

Household Hazardous Waste Collection Facilities

Household hazardous wastes are products that contain ingredients that are toxic, flammable, reactive or corrosive. These include paint thinner, fluorescent lights, pesticides and car batteries. If disposed of improperly, these products can be harmful to humans, wildlife and the environment. Proper disposal prevents household hazardous waste from entering the environment; damaging soil, groundwater and streams; or causing harm to people and animals.

The **Wastemobile** is a mobile facility that travels to communities in King County and sets up in parking lots for one to two days at a time. Residents can bring their household hazardous waste to the Wastemobile when it is in their community. The dates, locations and hours of the Wastemobile are listed on the [Local Hazardous Waste Management Program](#) website. The website will also tell you what items are accepted and not accepted.

For **Hazardous Waste Drop-Off Locations** can also be found on the [Local Hazardous Waste Management Program](#) website.

For your safety and that of others:

- Do not mix products
- Keep products in original containers
- Label products not in original containers
- Secure products so they won't leak
- Store products away from the vehicle's passenger compartment and keep them separate from items you wish to retain
- Stay in your vehicle during unloading

For More information on Household Hazardous Waste, call the Hazards Line at 206-296-4692 if you have any questions about hazardous wastes in your home.
